# Economic Condition of the Tribals in the

H K Ghosh

The area of the district of Ganjam is 4,83,504 square miles with a population of 16,64,829 out of which 1,12,005 belong to Scheduled Tribes. Out of the total area of the district an area of 1303 sq. miles with a population of 1,55,900 has been declared as scheduled areas under paragraph 6 of the 5th schedule of the constitution of India.

The two chief tribes of the district are Khonds and Sauras, their population being approximately 10,500 and 50,000 respectively who reside in the scheduled areas of the district. Some of these tribes have also settled in the plains and have lost their own primitive cultu e and traditions.

General description of the tribes : Aborigines of Ganjam like those all over India fall into two distinct classes. The true high landers who have retained much of their own culture and live a

slowly drifted from their mountain heights and have largely assimilated the culture and customs of their more sophisticated neighbours. The aborigines like the Kampa Sauras of parlakimedi Taluk, the Sudha Savaras and many of the Khonds do not present a problem greatly different from that of the non-Adibasi rural population with whom they live. Many of them are noor, miserable and diseased They need immediate assistance But the true high landers who live on the hill tons and slones like the Landia Sourse and Kuttia Khonds are some of the most ancient peoples of India. These tribes are believed by anthropolegists to be descendants of that very ancient Palaeolithic civilisa tion formerly widespread in South East Asia which spread into peninsular India as far back as

full life in the hills, and the aborigines of the plains who have neolithic times. These tribes still have their austrossistic tongue and preserve, many cultural elements that find parallels in Assam, Malaya, Lunon and the Pacific Islands. These people have maintained their moral and their will-tohapoiness.

Occupation of the tribes :- The main occupation of the aborigines of the district is agriculture and collection of jungle produce. The main crops are paddy, ragi and other dry grains and oil-seeds like niger and castor. The forest areas in many places are very extensive. There are a few heights which reach 5,000 feet. There are quite a few perennial streams, also. But the forest are being destroyed by the primitive Podu system of agriculture pursued by the aborigines and by forest fires. As a result many perennial streams have disappeared and summer flow of rivers is diminishing slowly but steadily. The aborigines have taken recourse to "Podu" or "Axe" cultivation since most of the flat lands occupied by them have gradually been snatched away from them by the non-aborigines by dishonest means. Wherever they have got sufficient flat lands or paddy lands they do not take to Podu cultivation. The Lanjia Saura however constructs terraces on the hill slopes for cultivation, The real life of the Lanjia Saura is on the terrace. It is on this that he expends his most loving and industrious care and even the axe cleanings are often built up by stone walls into rough terraces The terraces of the Langia Sauras are marvels of primitive engineering. Every field is protected by stone walls. From morning till night they are busy on the terraces. The Sauras take to "Podu" cultivation as only a subsidiary occupation using it only for cultivation of pulses and small millets by not deliberately cutting grees for use as beam stalks and by not ploughing over the clearings as the Kondhs usually do, The Khonds, are much more destructive in this respect. They depend almost entirely on Podu cultivation and have to go in for it to a much greater extens having lost the lands in the plains to the non-aborigines. This practice of cultivation called 'Podu' is done by cutting and burning forests on tops and slopes of hills and raising two or at most three annual crops on the ground and then abandoning that land until the trees have grown again sufficiently to admit a second feeling. This process continues until the land gets washed so bare of soil and seed that no more forest growth is possible. It is thus finally abandoned and there remains a bare hill side useless for any purpose, producing only thorns, creepers and coarse grass. In the Podu lands only dry crops are raised. A particular crop is not grown in any one season as the growing of mixed crops is a rule rather than an exception. A variety of grains are broadcast. In some places valuable commercial crops such are turmeric, castor, brinial, plantain and chillies are raised. The dry crops generally grown on Podu lands are Ragi. Redgrain, Judenga, Bails (creeper). Kangu, horsegram, Ghantia, Maize, Castor and other hill products.

Besides being a positive source of will the Podu cultivation is itself inherently defective and economically unsound. The average yield of each crop on an acre of Podu land is 2\(\)putties beside: about 1\(\)\(\)putties of creeper grains. The total yield is thus 4 putties

whereas in the low lying country on the plains the average yield per acre is 8 to 10 putties. Commercial crops are generally not grown on the hills. Generally the aborigines have taken recourse to Podu cultivation as a subsidiary occupation while in some remote cases specially in Khond areas, they do Podu exclusively mostly due to nonavailability of land in the plains. Besides the Village Headmen in the agency areas often encourage Podu cultivation for setting money from the aborigines. There is also a long standing habit among the aborigines to abandon old villages and from new ones. This habit is partly responsible for Podu cultivation. In the entire Agency portion of the district there are shour 12,600 acres under Podu cultivation.

Agricultural holding of the aborigines:—The agency areas of the district have not yet been surveyed.
So it is not possible to say accurately the extent of land öwned
by the aborigines. But from a
very rough estimate-ic is found
that there are 75,600 acres of
cultivated land both dry and wet.
Our of that more than 30,000

acres are owned by non-aborigines. Again out of the land available for the aborigines the extent of paddy land is very scenny and the crops raised by the aborigines are subject to the ravages of the wild animals. Due to these fact the aborigines of the district are non-fortunate to have a rice diet throughout the year. In most cases they have to depend on the roots and leafy plants for two to the throots and leafy plants for two to these months in a war.

Land tenure systems-The aborigines enjoy lands free of assess ment; but pay mamuls in cash and kind to the Muthaheads and their subordinates. This mamul system peculiar to the Ganjam Agency and in course of time has been historically connected with the system of land administration though it is not in any sense letally connected with it. This acquired a sanctity through established usages extending over a long time and in the beginning - res considered to be in conformity with the principles of justice and equity. The sole object of this "mamul" system was to keep the abor gines under check and control through the agency of nonorigine chiefs known as

Muthadars stationed in the locality.

The need for having such hill chiefs with a regular beirarchy of subordinate local officials was no doubt a necessity during the early parts of 19th century, when the indigenous hill races the Khonds and the Suarsa-lillerest and ignorance for the ways of the world and yet ready to go on the world and yet ready to go on the war path when any of their many susceptibilities are wounded, were very turbulent and were considered to be dangerous neighbours to others living in the plains.

After the advent of the

British rule the old administrative organisation in the Agency areas, being divided into Muthas each under a Bissoves or a Passa with his militis of Hodadars and Paiks was allowed to continue. They were made responsible for controlling the hill tribes and maintaining peace and good order as before. They were also allowed not only to enjoy the usofructs of some lands in their respective areas in which their services were required but also the customary mamuls paid by the hill tribes. These mamula have continued for over a century. They

Guarding the field

are paid either in cash or in kind. These mamuls consist of several items and the system was so very exhaustive that it never gave a chance to the hill tribes to improve their lot. For the first time a list of various kinds of mamuls paid by the aborigines to the hill chiefs and their subordinates was compiled by Mr. Taylor, the then Collector of Ganiam in the year 1900 in his book "Taylors Memoirs". The Partially Excluded areas Enquiry Committee has rightly remarked that the mamuls system is inherently bad in as much as it is troublesome, for realisation on the part of the Muthadars and further the Muthadars harasa the hill people by exorbitant demands.

purpose of the "namula" has been hot sight of and they have been increased and worked out with a view to provide ample income for the Hodsdars and the Muthaheads. The manuls were till now a great and a increasing burden on the hillmen, out of proportion to the services rendered by the Patros and Bissoyees and far in excess of what the hillmen would have given to

In course of time the limited

Government in the shape of ressonable assessment on each holding These mamula were so variested and miscellaneous in nature that it is doubtful that in that distant part they were ever collected in full by the Muthahards The Muthaheads realised it too well that a complete hold over the adibasis would be secured if in addition to the man-power they had at their disposal to compel mamuls they could appeal to the religious and superstitious traits in the character of the Adibasis. They installed Oriva deities and secured some mamula in the name of the deity so imposed. For the first time in 1905 the Adibasis seem to have started questioning the manual system. Government on becoming aware of this fact and of the fact that the mamul recognised and prescribed was based on no reasonable standards issued orders that recorded mamula could be revised by the Agent to the Governor subject to the parties agracing to such revision Them abolition of miscellaneous mamula was made in the year 1949, but those orders did not reach the remote agency areas & had hardly any immediate effect. They had to be republished in the year 1955 and again in the year 1955. Abolition of these manulu was a considerable relief. But the remaining "Sanja" manula and the "Clitt" manuls i. e., rent psyable in Kind or cash was also found to be quite exorbitant. A Special Officer was, therefore, appointed & there have now been commuted to cash under ordersof Government at Re. 1/- per acre of maddy land.

Other economic exploitations:— The aborigines of the district are subjected to various forms of exploitations which are mainly responsible for their wretched economic condition.

#### I. Perpetual indebtedness:-

The domestic economy of the kinoda and Sauras and their rarial conomy is in a very primitive atter. Their common needs are very few and easily satisfied and their needs are of such easy nature that the aborigines always "relatain" conditions that their income would cover their spenditure. With this self assurance they plod on till a sickness, a marriage or death ceremony over-takes them and over-throws the balance of their donestic

of festivals and ceremonies. They spend extravagantly on marriage. Again the aborigines are very superstitious in many of their beliefs. They do not use any medicine for cure of their illness except trying to propitiate their Gods. The Sauras as a tribe are obsessed with the thought of death and the menace of the other world. All disease all domestic or economic tragedy is the work of irritable ghosts who must be instantly appeared. When, therefore, someone in the family gets a touch of fever the Saura assuming that his deceased wife's deceased uncle is annoved with him, rushes off to get a pig or a buffalo to sacrifice. Being in a highly excited state of mind be serges to pay any price so long as he can get what he wants quickly. The money-lenders who are present among the aborigines watching carefully the needs of the aborigines and are always ready with tempting offers of cash loan or supply of animals on credit to suit their requirements. Thus the aborigines come under the clutches of the money-lenders and become an easy prey in the money lending trap. The money

economy. They are addicted to

drinking and more so on occasions

lenders in most cases at the time of making the advance deduct the total interest of the year from the principal though the horrower is made to sign that he has received full payment. Often the money-lenders procure from the debtors their signature on a blank paper and then put down any figure they like. These things rarely come to the notice of the law courts since the aborigines are ignorant and do not dare to bring to the notice of the officers the malipractices of the wilv enaditors. The rate of interest charged is exorbitant and it has got at the hands of the unscrupulous creditors a peculiar way of doubling itself after the first year. The interest swells. The principal remains unpaid. All the payments made by the debtors every year either by cash or in kind are adjusted towards the interest. Thus the debtors remain nernetually indebted to the money landers. It cannot but he admitted that the rural indebtedness of the abortisings owing to a detenerated system of moneylending is a living canker that has eaten into the very vitals of the economic life of the aborigines

of the district

Lack of proper marketing facilities:- The staple products of the aborigines are turmeric pulses, millet and oil seeds like mustard singelly niger and caster Arrowroot is grown in parts. Oranges are also grown in some parts of R. Udayagiri and Paralakimedi Taluks. Among the products collected and sold by the aborigines removind comes first Most of these products are exported from the Agency areas to the plains through the nerty traders and Sahukars who again supply the daily necessities of life of the aborigines which mainly comprise of salt, dry fish. onion, clothes, utensils, imported from the plains. The proper marketing of the goods with a view to secure a fair price for the agricultural or other forest produce of the Adibasis is an important problem. The Adibasis of this district are generally deprived of the benefit of proper marketing of their produce to secure a fair price and setting their daily necessities of life at reasonable prices owing to their idleness, ignorance, poverty and indebtedness. The Adibasis cenerally do not like to come to the hats'. They mostly depend on

their daily necessities of life that can have at their doors. Even if they come to the markets they are indifferent customers. They do not take the trouble of ascertaining the correct price for the commodities they purchase from a number of shopkeepers. Therefore they pay high prices. They purchase their requirements like tobacco, salt, dried fish through barter exchange and thereby they are cheated badly by the traders. The few examples given below will indicate the extent of exploitation to which the ignorant and simple aborigines are subjected to-

- One adda of blackgram (one Adda=60 tolas) worth 0-8-0 is exchanged for one adda of salt worth one anna.
- One adda of Jhudanga worth 0-6-0 is exchanged for one adda of salt worth one anna.
- One pumpkin worth 0-3-0 is exchanged for 1½ adda of salt worth 0-1-6.

In respect of marketing of the produce the Adibasis do not get a fair deal. In marketing of their produce they are exploited by the Panos and other middlemen who live on the aborigines. The Pano

tribe everywhere held in social detestation as the lowest of the low. But in the Agency areas of this district the Panos have established themselves in close contact with the aborigines living side by side with them though in separate hamlets. Originally probably they came to provide the people with cloth. They have been described in the oldest memories as a sharp, intelligent race with a rapid tendency to admixture From the mythology of the Khonds it is not clear as to when the Pano came into his life. In fact the Pano does not get any mention in the mythology of the Khond. But that he came into the area long ago and that too when the aborigines were probably naked savage is evident from many salient points. The Pano is the weaver of the area today and that would take us to believe that he was the man who captured the imagination of aborigines by showing them clothes and by teaching them their use. But their superior cunning and intelligence, however, has now

is the same as the Dom. Panks or

Ganda, the great untouchable

weaver caste of Central India.

sometimes regarded as a criminal

Shifting Cultivation

made them much more than mere weavers. They now become the agents, money-lenders and advisers of the aborigines. They have now made an extra ordinary and sinister dominion over them. In the Khond area they have an important place in society. They are the middlemen who market the produce of the Khond and who cater to his needs by way of supplying his requirements. The Pano has no title to any tribal land and as a child of the soil even though he is seen in some cases to have become a prosperous landowner now-a-days. By nature the Khond is indolent and lordly and is loath, to go out of his village leaving the village society and drinking bouts there. He has an inferiority complex and fears that he would be cheated. These and other reasons prevent him from making attempts to market his produce. The Pano is perhaps also responsible to no small degree in this since he offers to do the marketing facility. He (Pano) on account of his mixed origin and the commercially developed mental outfit is able to do better in this direction. Due to the feeling of inferiority and familiarity with which the

Khond looks upon the Pano the latter is able to coax and caiole and take enormous profit with the knowledge and acquittance of the Khond who consoles himself with the belief that the services of the Pano rendered to him deserves concession. The Pano of the southern Agency is more sharn than his brother in the Khond hills and knows better how to cater to the whims of the Source who are for more industrious mostly busy in their terrace cultivation. One important characteristic of the Saura is that unless it is absolutely necessary he would not venture out of his village. The Pano who is aware of the secret goes to the Saura to his house on the hill tops and thrusts his wares on the Saura and arranges that the price shall be paid in grain at the next harvest at very cheap rates plus an appropriate interest. When harvest time comes round the Pano spends his days standing on the Saura's thrashing floors scooping in his dues in baskets full without any proper heed to the exact amount he takes. Thus the Saura does not get an opportunity to market his produce and get a fair price for the same.

In addition to the facts stated shove lack of communication facilities also stands on the way of providing matheting facilities in the tribal areas and therefore the tribals are compiled to sell their produce to the middlemen at their doors at very low prices. Moreover, the houses of the aborigines, as they are usually stock and store their produce for sale at future date. So they sell away their produce if any at the time of harvest.

Higgs tontrol of land by nonshorigines. Most of the well lands available in the Agency areas are owned by non-shorigines, who have got the lands transferred to their name by fraudilent mean. As a result of that the abortigines are compelled to go up the hills and take to shifting cultivation. Many of the surgical are laid to the Many of the surgical are laid to the part of year depend on the jungle smuller for their living.

All these circumstances combined together keep the aborigines at the lowest condition of continued poverty and want. Though centuries have passed by the problem of the aborigines is self-there. So long as the hill people were isolated they developed

ped their own manners of life without any interference from outsiders. With the march of time and the development of means of communication the tribals are no longer isolated and . their contact with the men of the Plains has brought into existence several new problems which threaten to wipe out or completely absorb the aborigines into the general mass of population. They may be said to be suffering from inferiority complex. Drink, disease, malnutrition and debt are at work to handicap their development. There is already a large number of landless labourers among them. The holdings are small and the food production is insufficient. Podu cultivation considerably reduced the area of forests and the soil erosion is serious. What little they grow and earn goes into the pockets of the middle men and moneylenders. These prevailing circumstances confront the Government with very serious and acute problems. The average annual income and expenditure state-

ment of an average Adibasi

family of the District given below

will indicate that'the expenditure

exceeds the income to a large

extent

## Statement showing the annual income of a typical aborigine from his and the annual expenditore to maintain his family

Total income from produce		Expenditure to maintain the family of 4 members i. e., 2 adults and 2 children		Remarks

## Economic protections given so far

Abolition of miscellaneous mamuls and commutation of "Sania Mamuls"

As already mentioned in the year 1949 Government issued orders that all mamuls which did not have any relation to land should be abolished. By this order although the relief was substantial in most of the cases the "Sanja Mamuls" and Cist Mamuls were found to be unnecessarily exorbitant and this mamul has also been commuted to cash rent. By this the aborigines are relieved of payment of all kinds of mamula which previously never gave a chance to the Adibasis to improve their lot. The mamul system was mainly responsible for emigration of the Adibasis of this district to Assam hills, sale of their land to non-tribals and their continued indebtedness

2. To stop the transfer of land by the hillmen to the non-hillmen Government have probibited such transfers of land by hillmen to non-hillmen without premission of the competent authority. The law has been there since long but now it is more rigourously enforced. 3. To combat exploitation by money lenders the Orisas moneylenders Act of 1939 has been extended to the Agency areas under which the money-lenders are required to get themselves registered, charge moderate rate of interest and maintain proper accounts and grant receipts.

## The aborigines have lapsed

into a life of economic in action and mental lethargy on account of various reasons. For amelioration of the condition of the aborigines programme has been drawn up. Some of the measures mken up are given below.

 For proper marketing of the agricultural and other forest produce of the aborigines Government have started Multipurpose Co operative Societies in the tribal scess. Though the number of such Societies is very small at present it is being increased from year to year.

To provide the daily necessities of life of the aborigines at reasonable prices Government have started some Fair Price Shops at central village which are working satisfactorily.

 Standard weights and measures are being introduced to save the aborigines from the exploitation of the middlemen.

4. For improvement of agricultura Minor Irrigation Projects have been executed and the tribals are being supplied with plough bullocks, improved seeds and manure and agricultural implements freed cotot. Demonstration Farms are also being established in the ribal areas to impart necessary training to the Adibasis in improved methods of agriculture.

5. To wan the Akilasis away from Pedis cultivation and to provide them with settled cultivation and other amenities of life Adfisat colonies are being established where the Adfisat families are given financial sid for construction of their houses, purchase of ballocks, seeds and manure, agriculture implements. They are provided with 5 acres of land per how with irraction facilities.

6. Means of communication are being improved. The interior villages of the tribal areas are being linked with the main roads which will help the Adibasis in peoper marketing of their Agriculture and other forest produce. 7. For improvement of education among the Adibasis special type of schools named as Asirkam Schools have been started wherealong with general education upto M. E. Standard training is imparted in various crafts. In the Asiram Schools the

Adibasi pupils are given monthly stipend of Rs. 20): P.M. The Adibasi students reading in other educational institutions are also given stipends, lumpgrants and other educational facilities. 8. National Extension Service

Blocks have been opened in the tribal areas to take up various schemes for the economic and social improvement of the aborigines and developing the areas. It may however be admitted

that the enactments and measures have not solived much success mainly for the reason that due to their illinearcy, ignorance, abject poverty, age-old oppressions and exploitations they are not aware of their rights and able to take full drawings of the facilities extended. But it is a fact that the measures taken by Government for their extonous improvement are appressed by them and they demand more facilities now. All the same their poverty and extreme backward ness is a problem of unch vast magnitude that measures taken by Government can hardly be expected to solve it in any effective manner within so shorts period. It is, however, hoped that the successful implementation of the wolfare measurements of the wolfare measurements.

taken up now and opening up of communication in the tribal areas, thus bringing them in close contact with the outside world, will before long enable the Adibasis to take their rightful place in the contomic and social structure of the country.

### lustice by Oaths and Ordeals among Daflas

Padmadhar Saikia

The Daflas are mainly found in Kameng and Subansiri Frontier division N.E.F.A. They are also sparsely distributed in districts of Darrang and North Lakhimpur, Assam. The Daflas constitute an important section of N.E.F.A. tribes and their population is 1,50,000. (on 10th May, 1956, the Prime Minister furnished this figure on Dafla nonulation in N. E. F. A. as desired by Janab Amjad Ali. The shove figure is only rough and based on local estimates as no regular census has been taken so far.)

carried out field research among the Daflas of Charduar and Kimin. Charduar is nearly 24 miles from Tezpur and for many years it was the headquarter of the political officer, Balipara Frontier Division. Balinara Frontier Division as such no longer exists and this area a now transferred to Darrang Aistrict. At Charduar there are

In the year 1956, the writer

four thickly populated Dafia villages. Kimin is a base camp of Subansiri frontier division. The writer also had the opportunity to collect information from many hill Daflas, who in winter month came down to the plains for trada Among the Daflas, ouths and

ordeals are the traditional methods of determining the guilt or innocence of persons charged with crime. Cases of petty theft are very frequently settled by means of oaths. The practice of making the accused pass through some ordeals is now rare, and Daflas of younger generation in Charduar area have not witnessed any in their life. However ordeals are even now resorted to in the interior tracts

to adjudge cases of serious nature. Ordinary caths,- The Daflas have firm belief in oath and that is why petty cases are always setteled by this means. When something is stolen the owner of the property privately approaches the enspected culprit and tries to persuade him to return it. This former however must have sufficient gounds for the former however must have sufficient gounds for the former has coused and himself. If the accused person denies it, the complainant informs the villagers about it, whereignen the villagers about it was a second person among prove his innocence by the recognised method of outh, he will be considered gullty and he will his vice commissions.

If the accused agrees to take outh, a day is fixed for the same. On the appointed day the accused takes outh in presence of the elderly members of the village.

# weapons. Oath mear a Sacred Stone ('Son' dissplane').—According to the information collected the ordinary oaths are taken only in case of theft. In

www.p=/raccording to true intuition matter on the control of the collastry and articles only it case of the fifth case of subtreety and other essail offerees, outh a recken near a sared stone. In Berght Village of Chardian, there is a small up-fifth control of the control of

About five years ago, one youngman. Taba, of Betgash Village had adulterous relations with a young married woman Yamog. Yamog's husband, Taseng came to know about it, and informed Pinii Weli, the village headman. On being asked by the village elders Taba and Yamog confessed their guilt. At the same time they promised not to reseat ? it in future. Yamog's husband was not satisfied with the confession. He asked Taba and his wife to swear near 'Son stone in order to prevent future reccurrence of their illicit relation.

A day was fixed for that and on the appointed day Pinii Weli who is also an expert medicineman sacrificed a dog near the Sori". The liver of the dog was kept near the image and then he invoked the spirit, First Taba touched both the stone and sacrificed dog's liver with his left hand and uttered. "I will not do so in future. If I commit such an offence I shall suffer from bad disease." Yamog also took the oath in the same manner. But both of them indulged in illicit relations again even after the 'Sori-displant' and eventually fled sway to North Lakhimour Subdivision. Pinji Weli was clad to inform me that both of them later fell victims to had skin disease.

Pinji Weli suserced thas if some one commiss dullery after offer-for-foreigner to earth Frencher is some to suffer from some, bud disease in their sex organs. But at the same time, he assured that an expert medicifeman like him could cure such madicel by some magical performances if the guilty perion confesses. It Such a remody, heaves entails a good deal cost years but a youngman commissed adultery. When the public some property of the sex organization of the sex of t

came to know about it, the guilty persons were compelled to take oath. But after the 'Sor-Hapfew' they again indulged in adultery and both of them suffered from some serious diseases in their sex organs. The youngman succumed to it. The woman approached Plnij and requested to oure her. Plnij performed some magical ceremonies and she was cured. Plnij took a good sum from her as remuneration.

These are the common forms of oath practised by the Daflas. They have firm belief in the efficacy of the oath as a means of determining the innocence or guilt of persons, and all my informants are convinced of the evil consequences of false swering.

Ordeal—As mentioned before, the ordeals are racity resourced to and that too in serious cases such as murder and thete of very valuable properties such as Thetan bella, bead ser. There are two forms of ordeals. One is "Glosley-signed", that is proving oneset! by introducing the hands into bolling water. It is timply believed that bolling water of the surface of the control of th

a red hot piece of iron is placed on one palm of the accused. Few green leaves are kept over the palm and over it the red hot iron

green leaves are kept over the palm and over it the red hot iron piece is placed. It is believed that the red hot iron burns the hand of the guilty alone, whereas the innocent do not even feel the sensation of heat.

The following are the details of Chadung-displacy which took place about ten years ago in Hudubari Village, Charduar. The then Political Officer of Charduar was also present on the spot. One evening. Rayom, a villager of Bharali took a large quantity of rice-beer at Hare's house Hudubari village. Hare's wife was then pregnant. Rayom under the influence of rice-beer suddenly hit Hare's wife near her breast. The woman died at once Rayom immediately took to his heels. Hare informed the villagers that Rayom killed his wife. But Rayom denied it.

The Political Officer was informed about the incident. The Political Officer asked the villagers to decide the case amount of themselves. The villagers decided to settle the case by means of the ordeals of "Madess-diagons", Both Rayom and Hare agreedfto it. But the villagers suspected Hare also

and asked to prove his innocence by means of this ordeal.

The villagers cleared a portion of jungle near Bharali river and in that space a small enclosure was used by means of wooden poles with two entrances. Within the enclosed space a wooden platform was raised in slanting position. The medicineman and the assistant medicineman with Hare and Rayom had to spend the previous night the jungle. They were not allowed to take any hot thing. Further they were not allowed.

approached them that night.
On the appointed day, the men and women of all the Daffa villages of Charduar assembled on the spot. Pregnant women were not allowed to witness the ordeal. It is feared that the foctus inside the womb is harmed if a pregnant woman happens to witness it.

allowed to make fire. No one

At about 10 A. M. fire was lighted inside the enclosed space by frection method with pieces of bamboo and cane. It is believed that the fire will atonce kindle if the person or persons ready for raking oath are actually guilty. The fire was fanned with a shield. Someone brought water from the Habarali river in a bamboo pail. The water must be collected from a his river. A tiger tooth, a small stone, a small quantity of sand and some leaves and barks of tree were kent in the water. Then the water was boiled over the fire. The medicinemas got upon the platform and invoked the spirit. Before the final ordeal both the complainant and the accused had to nare their nails. because any quantity of slack lime inside the nails was supposed to nullify the effect of the ordeal. They also had to wash their hands clean as the snittle and

such impure things on the hand

mere believed to make it easy to

introduce the hand intof the hoil-

ing water.

Rayon came out from the jungle with a dao in his right hand. He had only lower germent and has hair was disherwelled. The male Duttes the their beautiful to the male that has a superior to the hand a superior to the control of the hand. Act the time of original his hair was not tited into knot according to their cutomal. He entered the enclosed space shouting comething very loughty and stones introduced his left hand into the boiling water. One entered his left hand into the boiling water. One entered his left hand into the boiling water. One entered has left hand into the boiling water. One entered has left hand into the boiling water. One entered has left hand to do the same bearing the superior has been been a superior to the same and the superior has been a superior to the same and the superior has been a superior had been a super

to prove himself not guilty of making a false complaint. When he had done so it was found that his hand was also burnt.

Refore the ordeal was undertaken the Dafla villagers solemnly declared that the hands of the innocent person could not be burnt by boiling water. But as the hands of both the accused and the complainant were burnt. none of the persons could establish innocence. Both Rayom and Hare had to pay one bullock. one Assamese silk cloth, one 'dao' each to the medicineman. Also they had to pay a fine of one pair of bullock which were killed and the flesh was distributed among the sudience

A similar case of ordeal took place in Rongian village. Rongia pias is in the Lakhimpur district, near Kimin, Subansiri Frontier division, N.E.F. A Gamar Tayo, an olderly member of Rongajian village lost some of this 'wintable properties of the state of the state of the subansiri Frontier and Irasa dahes. He peritoned the Political Officer that he suspected PI Kechs, another elderly member of his village and prayed for referses. PI Kechs denied the charge. The latter, further, asserted that the former

brought forth the charge against him is order to harsas him out of personal grudge. As there was no eye witness of the incident the Political Officer orded them to gettle the case by means of ordeal. They agreed to it. On the day of the ordeal some office assistants of Kimin and one interpreters were also present

It so happened that the accuracy Pil Kecha brought out the stone from the boiling water without injury. So Pil Kecha's apporters went to Gamar's house, killed some of his domestic pigs and the flesh was distributed mione the soldence. Gamar had to pay a fine of five bullocks, nor Tibean bell and one bras distributed to Michael School, which was not been supported by the soldence of the bullocks of the soldence of the soldence

Shri Rajani Gogoi, assistant Political Officer Kimin (recently retired) informed me that the Dallas base firm balled in such ordeals. But he also expressed the opinion that a man can often turn the opinion of the community in his favour if he can gather enough courage to introduce his hand into boiling water and make a gesture of being undurt, regardless of the real consequences. After the act of ordeal the atmosphere usually becomes so notly that one cannot examine

Caulsus-displus is a rare practice, and one asking the other for Clustons; is something like inviting the other for a fight. If after the ordeal the alleged person is proved not guilty his supporters raid the bouse of the complainant and forcibly take away his valuable belongings.

## The test of a good Ashram School

Ambalal P. Vyas

60 Ashram schools have been started by the State Government for educating the tribal boys and girls. Out of these five are meant exclusively for tribal girl students. Lacs of rupees have been spent on non-recurring expenditure for establishing these Ashram Schools, and lacs are being spent each year for running them. As the tribals were neglected and remained isolated for centuries the national Government is, each year spending these vast sums as a special facility to educate the tribal boys and girls and transform them into effecient, disciplined and patriotic

When such vast sums are spent annually out of the insufficient resources of the country it is our duty to see that every pice is well spent and bears desired fruits. This is a great National investment, perhaps much more important than most of our other coutlier projects, as the general well-being, character building and alround education of the children't of more than two cross of the tribles are involved in this

vast investment and grand experiment.

It is the duty of all of us, supervising, inspecting and executive officers as well as the Headmasters and other instructors to see that the Ashrams where lace of rupees collected from the coffers of even the poorest country men in the form of direct and indirect taxes are being annually upont are properly run and efficiently managed.

What are the tests of a good Ashram ? Ashrams like other schools are no doubt educational institutions, but they are much more than ordinary schools where the students are day acholars and spend only one-fourth of their time daily in receiving instructions. An Ashram School is a combination of school and home. The students pass all the twenty four hours there in the company of teachers and other comrades. The responsibility of an Ashram School is much more than that of an ordinary school. To my mind therefore knowly atmosshere harmony shirit of

on-operation and team spirit are as important as general studies in an Ashram School.

I however lay the highest

importance to the purity of atmosphere in an Ashram School; because without that no progress is possible in other spheres like studies, reaching of crafts, spining agriculture and games. It is the bounden duty of the Headmaster of an Ashram school to try his utmost to maintain the purity and peacefulness of the Ashram atmosphere. He fails in his duty miserably, where this is polluted by internal quarrels. either between the Headmasters and other teachers or between students and teachers. The Headmaster is expected to be an efficient teacher, a loving guardian and a strong but tactful superintendent of the institution. His efficiency, honesty, equity and sense of justice will be daily nut to test on several occasions. As the head of the institution he has to deal with higher inspecting officers, other teachers, Ashram students and the guardians and relatives of Ashram studenrs. Thousands of rupees pass through his hands, inspite of his honesty if he can not postntain the

accounts and stock books carefully and up-to-date doubts will be raised about his character. If he is honest as well as efficient and ractful other subordinate teachers will not be in a position to raise their heads against him and create trouble or succeed in breaking the peace of the institution. If he behaves like a loving father towards the Ashram inmates. host endants and teachers and navs constant attention to their well being and convenience the tribal students proverbially loyal, dutiful law-abiding and obliging will never so against him or be a tool in the hands of disobedient sub-ordinate teachers

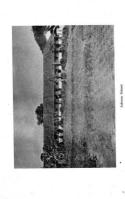

I have found on several occasions that whenever and wherever the peaceful atmosphere of the Adriam has been polluted the progress of that Adriam in all spheres has suffered. I have found with great sorrow that at times even some of the officers who think of only administrative matters take depth of the other other of the other o

is playing regular visits and is periodically examining the account books and stock books the count books and stock books the coughly, corruption will not have any basis to start 5thrive or continue. Rotter things will be automatically eliminated and meet with a natural death. Policy of "Divide and Rule" does not deserve to be applied in educations.

tional institutions, much less in Ashrams which are meant for a nobler purpose of all round education and character | uilding.

I, therefore, believe that if the purity of the Ashram atmosphere is maintained other good results are bound to follow. To my mind this is the real test of a good Ashram school.

# Traditional Methods of Treatment of Leprosy

Bhuban M. Das. & Tarun Chandra Sharms

The Mikirs, having a total numrical strength of 91,933 individuals (Census report of India 1951), constitute an important part of the tribal population of Assum They are mainly confined to the United Mikir Hills and North Cachar district, though they are found sporadically in other districts as well.

It has been reported by the Mikir Hills Sawa Kendra, Sarihaja (Mikir hills) that laprosy occurs in yery high frequency among the Mikirs During october 1937 an investigation was carried out by the authors among the Mikirs of Sarihajan® and its surrounding villages. Dats were collected from among 80 families comprising 576 individuals. It was found

that 4.14% of the population under consideration, are affected by the disease.

The present paper, however.

deals with the indigenous methods employed by the local Mikirs of Serihajan and its neighboaring screas for the treatment of the disease. In that connection, in order to understand the nature of treatment, the factors which are believed to be re-possible for causing the disease, have also been dealt with

Causes of the disease.—The Mikir believe that leproy (chi-l) is caused by python (Reipl) which is abundant in the Mikir hills. If a m n happens to touch the blood or the body of the pythonbe can hardly escape from the

<sup>\*</sup> Sachajan is a small locality situated at a distance of about 17 miles towards north-seat from Manipur Road. In lies near the border of Sibsagar and United Mikir hills and North Cachar districts. The headquarter of the Mikir hills Sova Kendra is simulated there.

disease. The python can spread the disease in an indirect way as well. Sometimes it contaminates the water of the hilly streams which are the only sources of water supply of the Mikirs. The contamination is believed to be caused when the excreta of nython hannens to mix with water. Any hody using that contaminated water may fall victim of the disease. In one village called Betalat he we came across a person & of forty warre of age, who killed a python and touched the blood of the latter, thereby became victim of leprosy.

It is a common belief among the Mikirs that cometimes this disease is caused due to an act of sin or violation of existing tradictions are similar tradictions total and religious customs. When a member of a family is districted to be under the family is believed to be under the influence of some evil spirit. The identity of the spirit is determined by divination which again determines the types of titles of rituals to be performed in order to see risk of the evil spirit.

Diagnosis of the disease—
Although the Mikirs have no knowledge of pathology, the age long experiences have made them able to diagnose the disease efficiently. According to the various symptoms that the patients suffering from leprosy develop, the disease is classified into the following categories by the

- I. Ekreng: In this type of leprosy the patient becomes a ricket. His flesh and skin wither and the fingers of the hands and the feet show deformity. 2. Eight: This is a very denote.
- ous and corrosive type of leprosy. The fingers of hands and feet of the patient are esten up right from the tip to the root. 3. Eder: Nodules in the face, nose and ear are the main
- no se and ear are the main symptoms of this type of leprosy. The nose becomes deformed and yellowish patches develop in the body. 4. Etcl. In this type of leprosy.
- the patient suffers more

<sup>†</sup> As it appears from the conversation with the local people that they do not like the publication of the name of the affected person, the name of the particular person could not be given.

Traditional Methods of Treatment of Leprosy Among the Mikirs 27

internally. External symptoms e few, but the patient dies VETY SOON.

Treatment- The indi enous methods of treatment of leprosy among the Mikits can be divided into wto rategories-(i) the magical c are and (2) the medicinal cure. At the occurance of the disease, they first take recourse to the magical cure by worshipping and offering sacrifices to the deity presiding over such illness. They worship the deity several times successively and if no sig., mprovement of the patient is seen, the causes of the disease is then believed to be due to personal act of sin or violation of prevalent customs.

The medicinal cure consists of applying a kind of indigenous herb. When it is applied upon the leprous patches, it burns the skin and the flesh making a severe wound. As per information, the wound may be healed after six months or a year leaving a burnt patch upon the body of the patient. Some people having such burnt patch in their bodies were found in this locality. Only the professional medicineman, who prescribes such treatment, knows the herb. The name of the herb is kept in secret in order to preserve their profession. We tried in all possible ways but failed to collect a specimen of the herb. We were told that there is not a single medicine-man in this locality under consideration and as such when it is

required, a medicine-man is called The magical methods applied in treating the leprosy are of two types-one is preventive in nature and the other is curative.

from a distant village.

The worship of Dor Arms (Doy deity) is performed in every house-hold once in a year (generally after the harvest) as a preventive measure leprosy. The nature of worship related to the treatment of this disease is described below. The following articles are required for the worship:

- 1. One he goat and one hen-2. One harbony (a gourd-vessel
  - filled with rice-beer known as Her Alens) and one bottle of Her Arak, (another variety of ricasbaar)
  - 3. A small piece of bamboo about six inches in length for divina-

tion.

- A small quantity of sun-dried rice.
- flour.
- 6. One brass-ring.

7. One silver rupee coin (called Khasi Tanka)

The professional priest known as Thebers conducts the rites and the sacrifice. The worship is performed in the jungle or at a considerable distant place from the family campus. There is no selected place for such purpose. The place is arbitrarily selected. A small mound of earth is raised at the place of worship upon which two models of snakes made of clay are placed cross-wise keeping the heads pointing to the same direction. The rice flour mixed with water is enrinkled over the mound. A plantain leaf is spread upon the ground surface in front of the heads of the snake models. A small quantity of sun-dried rice is kept upon the plantain leaf in two rows each consisting of three divisions. The Hartons and the Har Arab are placed by the side of the mound.

The brass-ring is kept upon one

division of rice. This arrangement

being made, the Thefers touches

the hen and the coat with the

hands and invokes the name of

the deity and utters masters which may be summarised as follows.

"O' Dor Riss (Riss-kins), We have given you so many things. We have brought the hen and the goat for you. Kindly you come and enjoy and take away the disease from our family". Then the Thekere cuts half-way the neck of the hen. The hen is allowed to fall on the ground which tosses vehemently on the ground before its lifeless body comes to rest. Thelere, then, observed divination examining the body and the head of the hen. It is said that if the sacrificed hen lies on the ground on its dorsal or on its ventral surface, the omen is bad. But if it comes to rest on its lateral sides left or right, the omen is good. Similarly if the head happens to move inside the feather or the wings, the omen is believed to be inauspicious, but otherwise the omen is good and particularly if the head is in the direction of the house of the worshipper. The stomach of the hen is disected and its entrails are scrutinised. Good omen is forecasted when the entrails are found in such a manner that there is no sign of rapture in the integuments which connects the loops of the entrails.

Good omen implies the pleasure

of the deity and this means the cure of the disease. Then the There sacrifices the goat by completely serving its body. The liver of the goat is taken out for observing divination by the Theker. Good omen is indicated by the presence of red spots in the liver. Black spot indicates bad omen. The liver heart and a little flesh of the coat and the hen are cooked by him for the deity. The hoof, ear and the tail of the goat are offered to the deity alone with rice, cooked flesh and a little rice-beer (Har Along). The silver rupee coin is dipped in the rice-beer before the latter is offered to the deity. The Thebere conducts another divination with the help of a bamboo piece. The niece of bamboo is first cut longitudinally into two pieces with one stroke of a knife and the

pieces are allowed to fall on the ground. The onen is forecasted by cashing the manner in which they have fallen on the ground allowing both drawal for ground allowing both drawal for ground and the pieces lies on the ground and the pieces lies on the ground allowing both drawal for ground and the pieces lies on the ground and the pieces lies on the ground and the pieces are pieces above, dorsal with the content is a sign and the pieces are ground autrace while the other shows ventral surface while the other shows ventral surface them it is a sign of good omen. At the end of this

divination. Theleve beats the brassring nine times with a knife asking the heavenly bodies and earthly objects which are believed to have observed the sacrifice, to remain as witnesses of the performance.

Women are not allowed to participate or to witness the sacrifice. But, they enjoy their respective shares of the sacrificial feast.

Thelen Wership—This worship

is performed in a family whenever any member of the family develops leproys. It is performed in the junge. This every conducts the rites and sacrifices. The following articles are required for the worship.

1. One pig (big or small)

Two hens.
 Other items are same as those used in the Dor worship.

A mound of earth is raised at the place of warship and the models of makes are arranged in the same manner as described in connection with the Dor worship. The procedure of the according and the divination are same as in the case of Dor worship.

One Thekers by name Cham Ingti sof Chiru Rongpi village (Sarihajan) claims that he has

cured several leprous nationts by performing Thelen worship. He told us that his father was a renouned Tickers in this locality who cured many leprosy patients by the traditional method of treatment

Another interesting procedure of magical treatment has also been reported. As per information, a python which is held responsible for spreading such disease, is consumed by the lener. The python whenever it is found. is killed and cut into pieces. The leper takes a piece of python flesh and goes to a river hank where the flesh is roasted for

consumption. He eats the roasted flesh and goes to the river where he swims against the current and while swimming he leaves off his viking' (under-garment) and comes out of the water without any cloth. Hereafter he is given a new cloth to wea

The Mikirs who seems to be greatly indifferent and ignorant about the modern medical treatment, are the victims of many fatal diseases. They never believe that only medicine can cure a disease. So the first series of treatments in case of illness emploved by them, consist of a chain of worships and sacrifices.

† The Authors are thankful to Mr. K. Pakvasi, Gauhati University, for his valuable suggestions in proparing this article.

## Glimpses of Aborigines Education

Nitrananda Das

An independent nation is as much proud of its educational system as it is of its mineral resources, metropolises or scientific discoveries. Particularly among the Asian countries the growth of national ideas and national outlook have a recent development. Due to lone period of subjection and colonial administration most of the Asian countries have remained backward educationally. After the second world war a few independent States have emerged in Asia and the national ideals which were brewing for a long period have crystalised. Except Japan Thich was hybrid of east and west) no other country has an educational system fitted into the national dant

Besides this general problem there is another important and thought provoking issue. India has nearly two crores of aboriginal population. These tribal people since the primevel time have adopted deceptible Tringes of the subcontinent. In the forest clad hills and plateau they are living from the historic past and have been mostly cut off from the civilisation. Their Arvan conquerors drove them away to their present habitation and since then they have been contented in their respective dwellings. The British rule careful v kent them away from the light, and the administration advised by the missionaries did not so beyond imparting selective education to the tribal people. Various missions established their convents. In this context the aboriging of India have been excluded from all possible systems of education except their own methods of except their to the young men and women.

The social scientists at the

present time have shown that culture of any people is an integrated product of all the institutions and no part of culture can be analysed devoid of its context. Education in man is the reawakening of his sleeping faculties Man is a rational and social animal. His rationality and social behaviours are the products of constant interaction of milieu and education. By Education we cannot take a partial view like the lectures in the class room or the routine duties in a school. Education builds individual personality. Therefore it is needless to say that a scientific outlook for education should incorporate the different values and ideals which a nation finds essential for her citizens.

Locking amide the tribal life of this subcontinent one is often annzed. Their quaint customs and practices and presides and presides and presides and presides and presides and presides and the property of the property of the property of the property of the president pursuits and itellectual manesures of the tribas, for their comantic pursuits and itellectual manesures. Fortunately anthropology at the present time has shaken off this garb and has emerged with the hope for the

survival of humanity inspite of the danger of the threatned destruction by the destructive weapons. Understanding of man by man has been the sole aim of the world at the present juncture of uncertainty; and through this alone it will be possible for man to give up wars and get engaged in constructive developments. Various scholars of modern anthropology have now come out with wide experiences from the tribes of the world. From their reports and publications we get enough materials to obtain elimpses of the educational systems prevailant among these

The life in any tribal area is not as smooth as bed of roses. Men, women and children working for ten hours a day hardly earn their subsistence for eight months in a year. The rest of the time they have to depend on the collections from the forests and other sources. Of course. there are certain tribes who are imporant of the agricultural practices, and live either on herticulture or collection. Therefore, adequate premium is levelled on work. The dignity of labour is the sole dignity of the simpler societies. Every body attains skill in all the essential services. and are inche of all trader There fore children of the age of ten or below share the duties of the adults and participate in daily activities. Grazing carrle and collecting fodder for them are the principal duties of the children. But they also take part in ploughing and harvesting. Idleness is universally decried. Simultaneously coercion is avoided. Margaret Mead in her book "Co-operation and Competition among the Primitive Peoples", has lucidly denicted the social objectives of thirteen tribes. She has taken into consideration the age development, sanctions, internal and external securities as well as the goal drive in these thirteen societies. She has shown how in the three individualistic societies the entire unbringing of the children is based on sordid self interest. The orientations of the individuals in those societies pra built up, to achieve self attainments without caring for other members. There is bitter competition among the four societies she studied. The mere presence of the others is taken as a comneting factor, and must be surpassed through all possible means. But the picture changes abruptly in

the co-operative societies, where the association of the individuals is taken as an improvement over the single ones, and even all forms of competition are roozed out from the early childhood. Accordingly the educational system is devized in these six societies, to achieve their respective scale.

Durk Des adles has also showed how among the Kwakiutl Indians of the North West coast of America the children are made to think in terms of competition and they are moulded to acquire wealth and finally destroy these. Among the Dobusts of the Pacific similarly the traits of suspicion grow from the childhood and later paranoid personalities of the Dobuans are the outcome of an identical training of the children. But the divertence in Zunsculture where coroneration is the cardinal principle of human behaviour the children are treated equally with the adults and the children are made to think that they are to play or streng the later life with the others. Corer in his study of the Lenchas of Cis Himalayan region has shown how the children are tramitory institution caters the need of education to the young. This dormitory or Junkadpa has compulsory membership. The boys and sirls above the age of eight or ten are eligible for memberthin. Once they are members they have to carry out all the obligations and duties of the society. The peried of povice is no doubt a very hard period during which the Oraon boys underey all sorts of hazards. They must obey the orders of the elders and perform the duties according to their instructions. By and by they acquire skill and proficiency in various fields and then only they are taken as full fledged members of the society. The Dormitory is the most important institution among several tribes of India. Of course among the Chotanagpur tribes there are

Among the Oraons the Dor-

This institution has been severely criticised from all the quarters. The missionaries have constantly depreciated the practice, and have shown the large speard of immorality due to this

separate dormitories for bachelors

and virgins. But among the Gonds

of Baster and other tribes there is only one for both. practice. The Hindus of the subcontinent have even levelled the premarital asser relations as prostitution. A first-hand field investigation has revealed that among these tribes sexual frustration is practically lacking. Boys and girls know early the mystery-of-sex and sexonlingly score it as common happenings of dully life. They neither suffer from any inhibition not lead them-selves to immediate in.

Sex is a biogenic primary need of men either in the Tundras or in the tropcis and its satisfaction is essential for them. Therefore to think survival without sexual satisfaction is rather abund Ir may be possible for the sages. Researches among men and women of the civilised societies clearly reveal the large incidence of sexual maladjustments. Work of Catherine Davis among the American students has shown that more than 60 percent of students of both the sexes practice homosexuality. No data among the Indian students have been collected. But it can be conjuctured that if any work is conducted among our students, it will provide surprising facts. Among the most civilised Americans, sex offences are growing every day and men and women in that society are full of inhibitions.

Are these not formidable facts requiring careful attention? At the present time the American educational system is employing the inclusion of sex education as a part of school carrioutus. Therefore without reservation it can be said that what the most civilised people are proposing now are being practised among our tribal people since ages. Moreover the large number of mental diseases, which are ironically said as the boon of civilisation, according to the psycatrists, arise due to sexual inhibitions and mal-adjustments. But I cathered from the reports from the Mental Hospitals at Ranchi, that, hardly any tribal people come there for treatment for mental disorders on account of sexual mal adjustments. Homosexuality and masturbation are practically unknown, among the tribal people.

Marital and conjugal life among the tribes I studied is a very smooth one. Obedience to the parents and superiors is imbibed among children from early childhood. But the obedience is not sought by coercion.

Many children reported that they did not remember to have been bearen more than once or twice by their parents. Those were due to the negligence of the child in performing the regular routine duties more than once and due to considerable loss arising out of that. Children from puberty are treated as equals and enjoy considarable freedom. Of course among savaral tribes of 'Africa there are hard initiation rites. They are the indicators of manhood, and every young man and woman has to undergo them to be full fledged members of the society. Then and then he or she can marry and live as respectable citizen. All these and many more will clearly reveal the great important levelled among the tribes on work and labour-

change in the tribal life due to the impact of modern civilisation. It is an established fact that no culture or society is seatic. The institutions there is, are constantly sequiring new trible. Teven changes are bound to crop up from within though the culture concerned may be insulated from the external influence. Therefore non of the trible can be tail

Now we can analyse the

to be out of the orbit of technical civilisation. Most of the Indian tribes are now shaking off their old moorings and are coming in large numbers to the open arena where contact with the civilised people are influencing change. The constitution of India has envisaged to assimilate these tribes within ten years from irs insuguration. Therefore the policy of the present adiministration is the assimilation of the tribes into Indian social pattern within this time-limit. The various state Governments have opened separate Departments for the welfare of tribal people and the Union Government have a Commissioner for the Scheduled Tribes. The Union and the State Governments are providing large number of scholarships to the students bailing from the Scheduled Tribes Moreover other types of financial help are accorded to them to promote education among the tribes. Slowly and gradually large number of tribal punils are coming to various schools and colleges and are also receiving technical education, But the main question which raises controversy among the tribes themselves and also among others

whether those measures are adequate to enlighten the tribal people. No doubt due to the efforts of the missionaries there are a handful of English educated persons among the various tribes. After the attainment of independence the Governments themselves have undertaken this funcction. There are evidently differences among the educated and the noneducated sections of the tribal population. Those boys and girls who are being educated in the institutions acquire new values and attitudes. Their lives and behaviours take dramatic turn. They are cut off from their moorings and hence provide puzzling issues before the educationists. During my field work I have come across several tribal students. I have also taken stock of their attitudes and values Among the boys in higher classes a very peculiar cross current is flowing. Their mental stream is flowing along new channels, and they are scentical about their life Their parents who would have normally trained them in the daily pursuits of life have become defunct personnel, and they have little regard for the organs which used to train their minds in the

past. The process of education may be considered from two points of view, the sociolo ical and psychological. The sociological function of education is to transmit the cultural equipments. knowledge, skills, values and sentiments from one deneration to the other. The psychological function is the effect on community life and its effect on the members of the society. A four noint criteria can be assigned to the education system (a) Methods (b) Personnel. (c) Content. (d) The motives and Attitudes, underlying the educational process.

On the above lines we can scrutinize the tribals education in transition. As has been stated earlier, among the contemporary tribal people the gulf between the informal education which is imparted at homes and the formal education which is imparted in the schools is practically lacking. Except the highly specialised craft or the madical spells there are no specialised organs. Moreover the education is always direct. By direct we mean learning by experiencing. We usually read and are made to understand things which have no relationships in our daily life and which we life times. The people of Uttar Pradesh or the Puniab are often told about the sea or the port. But hardly a handful of them get opportunities in their lives to see the sea. This acts as a handicap in their education and learning. We have already seen the personnel among the tribes. There are no professional teachers and of course no learned professors. As every body is tack of all trades except the sorcerer or magician the rest are teachers and students simultaneously. Among the preliterate societies the interest of children themselves make them active participants instead of passive recepients. Content of education similarly aims at two main points the individual adjustment to the community and the acquisition of the skills, including sex life. Now the last though not lesst in the motive and atritude underlying the educational process. There is a large grade of sharing the interests of the adult and there is always reciprocal obligation on the part of the adults to understand the handicans and difficulties of the children. Discipline among the tribes is self-evolved, unlike our societies where it is imposed by

sometimes cannot see during our

the authorities, prises are real sources of satisfaction, and the rewards are won for the benefit of the individual in the context of social benefit obtained from his actions. Thus the entire educational system is one of homogeniety and reciprocity. I have said earlier that there is a great deal of difference between the tribal hove who have joined the school and who have not joined. Often their teachers complain that the whool students hardly understand abstract formulations. Of course we cannot ceneralise the statement but it is not absolutely untrus-The indirect method of teaching has not been properly utilised by the tribes. The Government of our States have established Ashram Schools and in them we are importing education with vocational bias. The boys no doubt also work while they read in the Ashram Schools. At many places the oposition leaders are heard saying, that why our children would get Basic education while the non-tribal boys would go for the English education and then get employments. This is a point for consideration. We cannot say that the system of education prevalent in our comptry is good. Starting from eminent leaders to the common men every one is of the opinish that the University degrees are utilised ed merely as a vise for applying for the services. Besides they create a gap between the reality and the life which our educated boys and girls dream of leading after the termination of their stratics.

But that does not mean that the tribal people should be left to their lots. I am on no account a protagonist of segregation policy which I have vehemently opposed earlier. But simultaneously I cannot think in terms of want on destruction of tribal life and their educational process by replacing our system of education. Now-adays the educationists are keen to find the discostost and indiscipline among our students. Are we to make the tribal boys also indisciplined, who are traditional lly disciplined ? Definitely not Therefore the policy on tribal education should be a cautious one and should not disintegrate the tribal life. I do not claim to be an expert educationist. I am merely a humble student of anthropology. Therefore it is not

appropriate for me to suggest an exact educational system for tribal societies. Let the educationate, reformers and politicians think out the problem and the social scientists will make their scientific knowledge and experiences available, by fusion of which an effective educational solicy may be evolved.

The last but not the least

important is the problem of

language and script. Almost all the tribal languages have not got scripts. Broadly speaking the interior tribes speak languages belonging to two families Ho, Bhumii, Birhori, Khariai and the languages spoken by the Gonds and Sauras. The Dravidian language is spoken only among the Oraque of Chotnagour and several southern tribes. The frontier tribes of course speak dialects of Tibeto-Burman and Indo-Burman languages. But none of these landuages has got a script. Therefore the question of an uniform language for the tribes is not a minor problem. At the present time the tribes are educated through different regional langusees. But there are multiple com-

plains of lack of reception among

the smaller boys. The point is

whether the tribal students are to be educated at the Primery and Secondary states through the medium of their languages ! The most difficult rask before a scheme like this to be successful. is the adequate number of train ed persons in tribal languages. Peculiarly enough that section of the tribes who are educated pretend to forget their languages. So how can we expect them to develop their languages. To train sufficient number of teachers to teach them in their respective languages is a process which can be given a start. But again what about the poor non-tribal students in the schools situated in the heart of the tribal areas? They cannot be successfully educated through the midium of the prevalent tribal language.

Hind in Dewngst script has been accepted as the national language. Therefore one of the objectives of the administration is also to propagate Hindi among non-Hindi speaking population. There is no harm if the tribul people are also made to learn Hindi and regional language, side by side with their languages. One argument of whetence is that the tribul language have not been developed. But can we develon them and compile their gammars; Missionaries of the par, like Father Hoffman and Bodding have written gammars and localized the state of the particular of the state of the st

erabal Seate during Nizam rule a very seles Social Anthropologist Der Hamindorf at present Professor of London School of African and Oriental Sealules studied the problem of seript. Afree long and careful certuity, he practically ruled out the prospects of separately control of the prospects of separately control of the prospects of separately control of the prospects of the property of the coloution of new scripts is time-taking. The only solution to acripte problems is the regional scripts or Devans of the property of

### EDIT ORIAL

The present issue of the 'Adibasi' the journal of the Tribla Research Burcua, Orias, has been delayed due to certain unforescen events. There has been acure shortage of printing paper in the enater. The management of the journal has also been improved. A new shape has been given to the Journal and it has been decided to multish it both in English and Criva.

We welcome the formation of a "Central Advisory Board of Anthropology" by Government of India in the Ministry of Education. This is the first effort to co-ordinate Anthropological studies and researches in the country. The University Departments of Anthropology, the Tribal Research Institutions and the Department of Anthropology, Government of India, are all engaged in Anthropological studies and researches. By proper co-ordination of these activities the science will definitely occupy a very prominent place in the country. The first meeting of the Board had been held in Calcutta in the month of March, 1958. At the meeting it was emphasized that there are a large number of real primitive tribes in the State of Orissa and there is need for thorough survey and research among them, for the successful implementation of developmental schemes. The Board also included the study of Kutia and Dangaria Kandhas, Saoras and Gadabas within the Five Year Plan of researches in Anthropology, The Tribal Research Bureau officers have now completed their

studies among the Laujia Storas, Kanalhas and Juanga. The reports contain illuminating data on the above tribes. In addition to the normal course of duties of studying the culture and socio-economic condition of the different tribal communities, the officers of Tribal Research Bureau are engaged in studying the social status of different communities and evaluation of different welfare institutions see, for the successful implementation of welfare programmes, the advice of Tribal Research Bureau, my be utualed fully.

We invite the administrative officers in the tribal areas, the welfare staff, the social workers and other interested persons to contribute their experiences among the tribes or other communities of Orissa in form of articles.
